

vital

CONFIDENTIAL · APRIL 2026

PRODUCT MOCKUPS

Your health data, finally understood.

An AI health coach that combines wearables, blood results, and daily life into one conversation — every morning in 30 seconds.

€69/mo

Core subscription

93%

Gross margin

€1.4M

Year 1 ARR target

Apple Health · Oura Ring · Garmin · Strava
Swiss lab integration · Claude AI

THE OPPORTUNITY

People track everything. No one connects the dots.

MARKET

\$152B

Wearable health market by 2029.
Growing 27.5% per year.

PRICING

€69/mo

Users already spend €1,000+ on
hardware with no software
synthesis.

AI COST

€0.50/mo

Claude API with prompt caching.
Less than 1% of revenue per user.

YEAR 1 ARR

€1.4M

2,000 paying users at €69/month.
Breakeven at Month 6.

Up and running in 5 minutes

Users connect devices they already own — no new hardware required. Vital reads 30 days of history on first launch.

Welcome

Set Goals

Connect Devices

30 seconds every morning

The morning brief tells you what your body needs today. Then ask the coach anything, or log a quick event.

Morning Brief

Coach Chat

All your signals in one place

Upload any lab PDF — Vital extracts biomarkers and cross-references them with your wearable trends. The synthesis no competitor offers.

WEEKLY SUMMARY

What your body revealed this week

Every Sunday, Vital surfaces the patterns that matter — not just data, but what it means and what to focus on next.

Weekly Summary

WHY THIS MATTERS

Generic apps show you data.

Vital explains what it *means* — and tells you the *one or two things* that will actually move the needle this week.

RETENTION DRIVER

The weekly summary is the moment users see their *progress over time* — the primary driver of long-term retention and habit formation.

Users log in Lifesum. Vital reads the data.

No in-app food logging. Vital imports nutrition from Lifesum — the same way it imports sleep from Oura. Connect once, your coach knows what you ate.

Connect Lifesum

Nutrition in Data Tab

Coach Using Lifesum Data

HOW IT WORKS

- 1 User logs meals in **Lifesum** as usual
- 2 Vital connects via **Lifesum OAuth** or HealthKit bridge
- 3 Calories, macros & **meal timing** enter the coaching context
- 4 Coach connects food → sleep > recovery > performance

MVP PATH

Now: HealthKit bridge
Lifesum → Apple Health → Vital. Free, ships in days.

Phase 2: Direct API deal
B2B partnership — unlocks meal timing & item names

TECHNOLOGY & BUILD PLAN

MVP in 2 months, profitable by Month 6

MOBILE

Swift iOS

Native HealthKit (required — no backend access). Terra SDK wraps Garmin, Oura & Strava into one webhook.

BACKEND

FastAPI + TimescaleDB

Python async API. TimescaleDB for time-series metrics + relational joins across all health signals.

AI COACHING

Claude API

200K context window. Prompt caching at ~€0.50/user/month. Context = 7-day metrics + biomarkers + event log.

BUILD MILESTONES

M1-2 > M3 > M4-5

Month 1-2: iOS + HealthKit + Oura + Coach

Month 3: Garmin + Lab PDF + Lifesum (HealthKit bridge)

Month 4-5: Lifesum direct API + B2B pilot
